

WOW! Business Debuts 10 Gbps Ethernet and SIP Trunking Services in Cleveland and Columbus

Local Cable Operator Offers Thousands of Ohio Businesses Access to Faster and More Reliable Broadband Data and Voice Services

CLEVELAND and COLUMBUS, Ohio – (April 15, 2014) – [WOW! Business](#), a communications and cloud service provider, today announced the availability of 10 Gbps Ethernet and Session Initiation Protocol (SIP) trunking services for businesses in Cleveland and Columbus. The Ohio cities join Chicago and Detroit as major Midwest metro areas that can now tap into WOW! Business as a new alternative for fast and reliable broadband data and voice services.

“WOW! Business is committed to Cleveland and Columbus and to providing these diverse business communities with critical Ethernet and SIP trunking services that help lower IT costs and enhance productivity,” said Brad Cheedle, senior vice president of WOW! Business. “We’re aggressively expanding our portfolio of voice, data and cloud computing services to give businesses competitively priced options to their existing broadband services and the companies that provide them.”

The WOW! Business Ethernet service reduces IT costs while providing much greater bandwidth for voice, data and cloud computing services. The scalable service delivers speeds up to 10 Gbps, is less expensive than other data networking options such as T1 lines, and can be turned up quickly using a single fiber connection.

Additional WOW! Business Ethernet benefits include:

- Four levels of Class of Service
- Network performance visibility through WOW’s Customer Monitoring Tool
- E-Line, E-LAN, and E-Tree configurations

WOW! Business SIP trunking is a burstable voice service, enabling business customers to better manage their network calling capacity and accommodate traffic spikes.

Additional WOW! Business SIP trunking benefits include:

- Dedicated voice bandwidth that does not contend with other applications, unlike other voice services such as integrated T1

- Availability of multiple call capacity packages that, when combined with the ability to burst, help customers ensure that they aren't purchasing excess capacity
- Configurable as either SIP or Primary Rate Interface (PRI)

WOW! Business provides IP-based network, data, voice and cloud services for small and mid-sized business, enterprise, government and wholesale customers. The company owns and operates over 42,000 miles of local fiber-optic and coaxial networks in 19 U.S. markets, along with data centers that provide customers with scalable, low-latency access to national carrier backbones.
